

EFE DEMIRER

Candidate RF & Microwave Systems Engineer · Antennas & Test Automation

İzmir, Turkey | +90 554 638 86 92 | efedemirer.tr@gmail.com | efedemirerr.github.io | LinkedIn

SUMMARY

Senior Electrical and Electronics Engineering student at Yaşar University specializing in RF & Microwave systems, antenna radiation pattern testing, and high-frequency instrumentation automation. Laboratory and defense experience at ASELSAN REHİS Test Centers Directorate conducting planar near-field antenna scanning, VNA 2-port calibrations, RF amplifier characterization, and real-time spectrum analysis. Skilled in C# GUI test automation, SCPI/Ethernet API instrument control, and G-Code Cartesian positioning systems.

EDUCATION

Yaşar University – İzmir

09/2022 – Present

B.Sc. in Electrical and Electronics Engineering | 100% Merit Scholarship | GPA: 3.73 / 4.00 (High Honor Standing)

Relevant Coursework: Antennas and Propagation (EEE 4340), Electromagnetic Field Theory, Microwave & RF Measurement, Digital Communications, Signals and Systems

Cem Bakioğlu Anatolian High School – İzmir

09/2018 – 06/2022

High School Education | Salutatorian (Ranked 2nd in School) | Graduation Grade: 96.89 / 100

WORK EXPERIENCE

ASELSAN REHİS Test Centers Directorate

06/2026 – 08/2026

Intern Engineer (RF & Microwave Systems / Test Automation)

- Contributed to the development of Cartesian X-Y scanning automation and C# .NET graphical user interfaces (GUI) for planar near-field antenna test systems in anechoic chambers.
- Performed Vector Network Analyzer (VNA) calibrations, port reference plane extensions to cable ends, RF component characterization, and power amplifier testing.
- Conducted P1dB compression tests to measure amplifier saturation and non-linear compression characteristics.
- Performed near-field chamber measurements and analyzed RF radar-absorbent material performance using the NRL Arch Test method.
- Engineered API-based instrument control, Ethernet communication integration, and automated test execution scripts.
- Designed a real-time signal peak detection algorithm with dynamic thresholding for automated spectral measurements.
- Evaluated spectrum analyzer specifications and conducted laboratory/field spectral signal monitoring.
- Supported the planning of RF test scenarios and the execution of automated measurement test suites.
- Developed hardware safety interlocks with Limit Switches, stepper motor drive systems, and GRBL G-Code integration on CNC hardware shields.

OPA Mühendislik

07/2025 – 08/2025 & 08/2026 – 09/2026

Intern Engineer

- Performed ground resistance measurements, residual current leakage tests, and technical compliance reporting.
- Participated in field installation, electrical panel assembly, and CAD engineering for solar PV and smart grid/storage infrastructures.
- Prepared solar PV electrical projects and single-line schematics using AutoCAD.
- Executed solar plant simulations, yield analyses, and production performance forecasting using PVSyst.
- Designed power factor compensation panels, calculated capacitor bank sizing, and configured reactive power control relays.
- Calculated power loads, selected cable cross-sections, and supported installations for electric vehicle (EV) charging stations.
- Assembled electrical distribution boards, connecting circuit breakers and residual current devices (RCD) for PV arrays.
- Participated in periodic inspections of transformer substations under High Voltage Facility Operation Responsibility regulations.

TECHNICAL SKILLS

- RF & Microwave Engineering:** Antennas & Propagation, Vector Network Analyzers (VNA), Real-Time Spectrum Analyzers, VNA Full 2-Port Calibration, P1dB Compression Testing, RF Component Characterization, Near-Field Chamber Testing, NRL Arch Testing, S-Parameters & Impedance Matching
- RF Test Automation & Software:** C#, .NET, Windows Forms, Graphical User Interfaces (GUI), Python, API Integration, SCPI & G-Code, Serial (RS-232), Ethernet TCP/IP, MATLAB
- Motion & Scanning Hardware:** Planar Cartesian X-Y Motion Control, Stepper Motor Drives, CNC Shield V3, GRBL Firmware, Limit Switch Safety Interlocks, Arduino & STM32
- Simulation & Modeling:** MATLAB & Simulink, LTspice, Proteus, RF Power Amplifier Circuit Simulation
- Electrical & Power Systems:** AutoCAD, PVSyst, ETAP, Solar PV Systems, Single-Line Diagrams, Power Factor Correction

LANGUAGES & PROFESSIONAL COMPETENCIES

- Languages:** English B2 (Upper-Intermediate), Yaşar University School of Foreign Languages certified
- Professional Competencies:** Cross-functional Team Collaboration, Technical Documentation & Reporting, Analytical Problem Solving

ADDITIONAL INFORMATION & CREDENTIALS

- Credentials:** National Technology Initiative Chip Design Certificate (Code: 35867118094667) | TUSAŞ LIFT UP Conference | TÜBİTAK 4006
- Personal:** Driving License: Class B | Military Service: Postponed until 31/12/2031
